

Power Calculations for Correlates of Risk (Single-dose Approach, No Perm. Discontinuation) Adherence Scen. 2

Power is computed as the proportion of the ~1000 one-sided 2.5%-level tests to reject the null hypotheses.
'Wald/Conc.' uses a daily grid for controls; 'Cox PH Model/Conc.' uses a single record for cases and a daily grid for controls.
annual incidence rate = 0.04, imperfect adherence assumed,
prob_misInfu = 0.02, prob_misVis = 0.03, r_infuDiscont = 0.03, r_dropout = 0.05
